PRESENTATION

Our Ice Packs are eutectic plates based on water, also called ice bricks, enabling to maintain your thermal sensitive products under cold chain during shipment.

Our Ice Packs are made in HDPE plastic and offer superior thermal performances.

They are more robust than flexible gel packs and bring the necessary safe to your products. They have also a longer lifetime.

USE AND POSSIBLE OPTIONS

Cryopak proposes 3 sizes of Ice Packs that are very simple to use: you freeze the Ice Packs and then you insert them directly or with a waiting time before insertion in your insulated packaging. They are easily washable and reusable several times.

Ice Packs can be conditioned in trays of several units to optimise the preparing time. They are deliverable in returnable trays instead of cartons for a more ecological solution.

You can also get your Ice Packs already frozen: they are ready to use (payable service, consult us).
